

REVIEW OF PRODUCTS DURING DESIGN PROCESS!!!!

Website Design

What tester said about web during design process?

It was looking well from the start and it was nice and colourful and very effective. The information was clear and easy to read.

What changes I will make now tester has looked at website:

I don't have many changes to make because the tester thought the text was clear and there is enough information and the colours seem fine also.

Movie

What tester said about movie during design process?

It is very good and all the information is suitable for those at the ages of 11-14 and all the colours and pictures are neat and stand out well. The Sound is good and goes with the information showing. The text at times is hard to read.

What changes I will make now tester has looked at movie:

I will change maybe the style of the writing and insert another song maybe. I'll not change much more than that as I am happy and the tester is also happy with the way the rest is.

Presentation

What tester said about presentation during design process?

That it was well presented and the colours were nice and they stood out, also the text was understandable. It also made it better with the video imported.

**What changes I will make now tester has looked at presentation:
I will not change anything on my presentation as I think is all to
the standard.**
